Yaorong and Thuy, this looks good to me with minor edits. Mike, do we need to seek approval before sharing with K&H? This is all consistent with what has been shared externally to date. We may also want to share this with the comms folks so it can be posted as a QnA.

Hi Thuy and Kimberly,

I quickly put together a one pager on some of our current plans to provide to Matt Harney, the K&H Law attorney. Please take a look to see if it is appropriate. Maybe we need to drop #5.

Thanks,

Yaorong

Hi folks,

Just checking in on the question below. We would really value some feedback as soon as possible.

Thanks,
Matt

Subject: RE: Additional testing

Hi folks,

To provide a little more background, we have a client that manufactures fluorinated HDPE containers. They are considering conducting some rinse testing in light of the EPA's testing described in the memo of March 4. However, the memo states that the testing will be expanded to include different conditions such as other solvents, rinse contact times, testing temperature, etc. We realize it may still be early in the process, but we would like to know more about what kind of alternate conditions are being considered. If you have any specifics on solvents, temperatures, etc., we would be in a better position to scope out our own testing.

If it would be easier to discuss on the phone, I am currently free any time Wednesday and Thursday.

Thanks very much,
Matt

Subject: Additional testing

Hi Thuy and Yaorong,

Matt Harney at Keller & Heckman is interested in learning more about our future testing so that a K&H client can match some of that testing. He's a technical guy. Can you get back with Matt on your next steps? I know some of this is still under deliberation/discussion, based on other results and method development for some formulation types.

Best,
Kimberly
